Summary

Motivated DevOps Engineer with hands-on experience supporting cloud infrastructure, CI/CD pipelines, Linux server administration, containerization, Infrastructure as Code, deployment automation, monitoring, and troubleshooting. Practical experience with AWS, Terraform, Docker, Kubernetes, GitHub Actions, Jenkins, Nginx, Prometheus, Grafana, and CloudWatch.

Strong foundation in Google Cloud Platform (GCP), Linux command-line tools, Bash/Python scripting, networking, virtual machines, storage, databases, cybersecurity, and cloud security concepts. Experienced in infrastructure automation, application deployments, system monitoring, log analysis, troubleshooting, technical documentation, and collaboration with development and engineering teams. Eager to apply modern DevOps practices in a fast-paced, AI-driven engineering environment.

Education

University of Colombo School of Computing (UCSC)

2023 – 2026

B.Sc. Computer Science (graduated)

Colombo, Sri Lanka

Saralankara National College

2018 – 2021

G.C.E. A/L – Physical Science (1A, 2B)

Galle, Sri Lanka

Experience

StackNet (Pvt) Ltd

Nov 2025 – Present

Junior DevOps Engineer

Colombo, Sri Lanka

- Designed and supported cloud deployment architectures covering infrastructure planning, provisioning, application deployment, networking, security, monitoring, troubleshooting, and production support across multiple projects.
- Provisioned and managed AWS cloud infrastructure using Terraform, including EC2, VPC, IAM, Security Groups, and supporting services, applying Infrastructure as Code (IaC), access control, least-privilege principles, and secure configuration practices.
- Built and maintained CI/CD pipelines using GitHub Actions and Jenkins, automating application builds, Docker image creation, testing, deployment workflows, and production releases.
- Containerized and deployed applications using Docker and Docker Compose, with hands-on Kubernetes experience for container orchestration, workload management, scaling, and reliable deployments.
- Designed customer-specific deployment environments based on application requirements, infrastructure capacity, resource utilization, and billing considerations, delivering tailored cloud infrastructure solutions across multiple projects.
- Managed Ubuntu Linux production environments including command-line administration, Nginx reverse proxies, DNS, SSL/TLS, networking, firewall configuration, and system-level troubleshooting to maintain secure and reliable application availability.
- Implemented monitoring and observability using AWS CloudWatch, Prometheus, and Grafana to monitor dashboards, system health, resource utilization, application performance, logs, alerts, and production issues.
- Performed infrastructure and deployment troubleshooting, investigated system and application issues, identified potential root causes, and escalated complex problems when required.
- Collaborated with development teams throughout the software delivery lifecycle, including deployment architecture, infrastructure setup, CI/CD configuration, production releases, troubleshooting, optimization, and operational support.
- Maintained deployment and infrastructure documentation and followed established procedures for secure infrastructure changes, production operations, and service reliability.

Technical Skills

Cloud Platforms: AWS (EC2, VPC, IAM, ECR, ECS, EKS, Fargate, S3, Organizations, Billing & Cost Management), Google Cloud Platform (GCP) (Compute Engine, Cloud SQL, Cloud Storage), DigitalOcean

DevOps & CI/CD: CI/CD, Continuous Integration, Continuous Delivery, Deployment Automation, GitHub Actions, Jenkins, GitOps, Argo CD

Infrastructure as Code & Automation: Terraform, Infrastructure as Code (IaC), Bash Scripting, Python Scripting

Containers & Orchestration: Docker, Docker Compose, Kubernetes, Containerization, Container Orchestration, Amazon EKS, Amazon ECS, AWS Fargate

Linux & System Administration: Ubuntu Server Administration, Linux Command Line, Nginx, Reverse Proxy, SSL/TLS, System Configuration, Process Management, Troubleshooting

Monitoring, Logging & Observability: Prometheus, Grafana, AWS CloudWatch, Monitoring Dashboards, Alerts, Logs, System Health, Resource Monitoring, Performance Analysis

Networking & Infrastructure: VPC, TCP/IP, DHCP, DNS, Cloudflare, Firewalls, Load Balancing, Subnetting, Gateways, Virtual Machines, Network Configuration

Security: IAM, Least Privilege, Security Groups, SSL/TLS, Firewall Configuration, Network Security, Cybersecurity Fundamentals

Databases: MySQL, PostgreSQL, MongoDB, Cloud SQL

Version Control & Collaboration: Git, GitHub, Jira, Agile, Scrum, GitOps

Programming Languages: C, JavaScript, Python, Java, Dart, Go

Key Projects

Cloud-Native Web Application Platform — AWS

2026

- Provisioned AWS cloud infrastructure using Terraform, including EC2, VPC, IAM, and Security Groups, applying Infrastructure as Code and least-privilege security practices.
- Containerized a React/Node.js/MongoDB application stack using Docker and automated application builds and deployments through GitHub Actions CI/CD pipelines.
- Configured Prometheus and Grafana monitoring, Cloudflare DNS, and Nginx reverse proxy with SSL/TLS to support system health monitoring, secure networking, and application availability.

AgriSL — AI-Powered Farming Platform on AWS

2026

- Developed a bilingual AI farming platform using React, Node.js, and MySQL, including a CNN-based crop disease detection system built with TensorFlow for image-based disease classification.
- Deployed the ML inference pipeline using AWS Lambda and Amazon S3, enabling scalable image uploads and on-demand crop disease predictions through serverless cloud infrastructure.
- Containerized application components using Docker and implemented automated CI/CD pipelines with GitHub Actions to support repeatable and reliable application deployment workflows.

GitOps Kubernetes Deployment with Argo CD

2026

- Built GitOps deployment workflows using Argo CD for automated Kubernetes deployments from GitHub repositories, implementing self-healing and configuration drift detection.
- Deployed Prometheus and Grafana for Kubernetes cluster monitoring, observability, system health tracking, and infrastructure performance analysis.

FitPulse — Fitness Improvement Mobile App

Ongoing

- Designed and developed a cross-platform fitness application using Flutter and Dart with role-based access for Admin, Coach, and User accounts, featuring coach discovery, matching, and ratings.
- Built the backend with FastAPI, PostgreSQL, and SQLAlchemy, implementing user management, coach ratings, subscription state management, and Google OAuth authentication.
- Designed a tiered free/premium subscription model with monthly and annual billing and implemented an invite-based coach onboarding workflow.

Encrypted Chat Application

2025

- Designed and built an end-to-end encrypted chat application using Python socket programming and RSA public-key cryptography to explore secure TCP/IP communication.
- Used Wireshark to capture and analyze network packets, validating the encryption protocol and gaining practical experience in network security analysis, TCP/IP communication, and troubleshooting.

Virtual Network with Automated DHCP IP Assignment

2025

- Designed a virtualized network environment using multiple virtual machines, implementing a DHCP server to automatically assign IP addresses and network configuration to client machines.
- Configured virtual networking, IP address ranges, subnetting, DHCP scopes, gateways, and DNS settings to enable automated network connectivity between virtual machines.

Certifications

Introduction to Kubernetes (LFS158) — Linux Foundation

Introduction to Serverless on Kubernetes (LFS157) — Linux Foundation

Introduction to DevOps and SRE (LFS162) — Linux Foundation

Introduction to DevSecOps for Managers (LFS180) — Linux Foundation

Getting Started with DevOps on AWS

Amazon EKS Primer — AWS

AWS Fargate Overview

Introduction to Containers — AWS

Introduction to Cloud 101 — AWS

Linux: Network Configuration — LinkedIn Learning

Introduction to Cybersecurity — Cisco

Soft Skills

Problem Solving, Troubleshooting, Analytical Thinking, Root Cause Analysis, Communication, Team Collaboration, Cross-Functional Collaboration, Adaptability, Ownership & Accountability, Documentation, Time Management, Continuous Learning
